
a Aim 2: the trainee
A trainee asks in claude.ai
Beethoven: one click starts the trainee's worker
Claude Code worker, a Slurm job on the WSU grid
b Aim 1: the gate-conditioned repair loop
a task and its gate
Task and its pass/fail gate, written by people, sealed
Write the Slurm job
Submit; read the scheduler and the job's log
Does the gate pass?
It passes: the result goes to the trainee for review
Repair from the message: refused, out of memory, a traceback, or the gate fails
At most 6 repairs and 2 GPU-hours, then the task counts as failed
Compared with one shot and with a loop that stops at a clean exit
c Aim 3: from labeled CT to X-ray
white bars, 20 mm
labeled CT
physics render
real radiograph
