a
Aim 2: the trainee
A trainee asks in claude.ai
a task and its gate
Beethoven: one click starts the trainee's worker
Claude Code worker, a Slurm job on the WSU grid
b
Aim 1: the gate-conditioned repair loop
Task and its gate, written by people, hashed
Write the Slurm job
Submit; read the scheduler and the job's log
Does the gate pass?
passes
Pull request for the trainee
Repair from the message: refused, out of memory, a traceback, or the gate fails
At most 6 repairs and 2 GPU-hours, then the task counts as failed
Compared with one shot and with a loop that stops at a clean exit
c
Aim 3: labeled 3-D into 2-D
white bars, 20 mm
labeled CT
physics render
real radiograph
