a limited fluoroscopic field, located on the panorama

7 exposures · 660 mm · 25 nodes

a column of vertebrae is periodic at the body pitch, so what places the field is the margin over the best peak a body away, not the peak
every frame is formed through a fitted C-arm card; the boxes are the render's labelled bodies standing in for a detector run, which is scored elsewhere

what the software says

```
LEVEL READOUT   case verse585
field    fluoroscopic, 130 mm, 5 bodies
hash     NCC 0.96, margin 0.11 over one body off
anchor   C2; C1 is in the chain and is not counted

target is the 12th vertebra counting cranial to caudal
target is the 13th vertebra counting caudal to cranial

LEVEL    T6, the 12th body from C2
         confidence: margin 0.11 over the one-body alias
```

the name is the count from C2 on the ordinary inventory
the confidence is the margin over the peak one body away
