typical column · verse108 N = 23 · R + C = 22 ✓ no flag

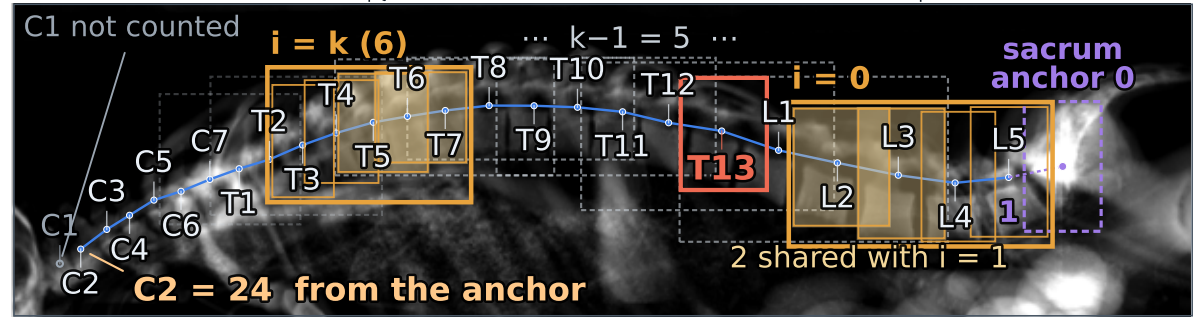

translate by the commanded move · re-detect
link on the two-body overlap (NCC) · extend the chain, one node per body

Shaded pair = the two bodies consecutive frames share; that is the link.
C1 is drawn and NOT counted: box C1 as well and 22 becomes 23.

thirteenth thoracic vertebra · verse547 N = 24 · R + C = 23 ≠ 22 → FLAG

translate by the commanded move · re-detect
link on the two-body overlap (NCC) · extend the chain, one node per body

It flags the column, not a body: N = 24 holds a T13 and an L6 alike.
Needs C2 and the sacrum in one field: 14 of 1175. Dashed = placed, not labelled.
